## Snapshot Report

NCES 2004-457SC4

The National Assessment of Educational Progress (NAEP) assesses mathematics in five content areas: number sense, properties, and operations; measurement; geometry and spatial sense; data analysis, statistics and probability; and algebra and functions. The NAEP mathematics scale ranges from 0 to 500.

## **Overall Mathematics Results for South Carolina**

- In 2003, the average scale score for fourth-grade students in South Carolina was 236. This was higher¹ than the average score in 2000 (220), and was higher than the average score in 1992 (212).
- South Carolina's average score (236) in 2003 was not found to be significantly different from that of the nation's public schools (234).
- Of the 53 states and jurisdictions<sup>2</sup> that participated in the 2003 fourth-grade assessment, students' average scale scores in South Carolina were higher than those in 17 jurisdictions, not significantly different from those in 25 jurisdictions, and lower than those in 10 jurisdictions.
- The percentage of students in South Carolina who performed at or above the NAEP *Proficient* level was 32 percent in 2003. This percentage was greater than that in 2000 (18 percent), and was greater than that in 1992 (13 percent).

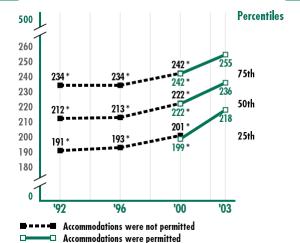

Proficient, 249-281; Advanced, 282 or above.

Performance of NAEP Reporting Groups in South Carolina						
	Percentage	Average	Percentage of students at			
Reporting groups	of students	Score	Below Basic	Basic	Proficient	Advanced
Male	50	237 🕇	18 ↓	47 🕇	30 1	5 ↑
Female	50	234 🕇	23 ↓	48	26 🕇	3 ↑
White	55	246 1	10 ↓	44 ↓	39 ↑	6 ↑
Black	40	222 🕇	35 ↓	52 🕇	12 🕇	1
Hispanic	3	232	22	53	23	2
Asian/Pacific Islander	1					
American Indian/Alaska Native	#					
Free/reduced-price school lunch						
Eligible	53	226 🕇	31 ↓	51 🕇	16 🕇	1
Not eligible	46	247 🕇	9 ↓	43	41 🕇	7 🕇

## Average Score Gaps Between Selected Groups

- In 2003, male students in South Carolina had an average score that was higher than that of female students (3 points). This performance gap was not significantly different from that of 1992 (1 point).
- In 2003, White students had an average score that was higher than that of Black students (23 points). This performance gap was narrower than that of 1992 (31 points).
- The sample size was not sufficient to permit a reliable estimate for Hispanic students in South Carolina in 1992.
- In 2003, students who were not eligible for free/reduced-price school lunch had an average score that was higher than that of students who were eligible (21 points). This performance gap was not significantly different from that of 1996 (25 points).

## **Mathematics Scale Scores at Selected Percentiles**

An examination of scores at different percentiles on the 0–500 NAEP mathematics scale at each grade indicates how well students at lower, middle, and higher levels of the distribution performed.

- # The estimate rounds to zero.
- --- Reporting standards not met; sample size insufficient to permit a reliable estimate.
- \* Significantly different from 2003.
- ↑ Significantly higher than, ↓ lower than 2000.

<sup>2</sup> "Jurisdictions" includes participating states and other jurisdictions (such as the District of Columbia and the Department of Defense Dependents Schools). NOTE: Detail may not sum to totals because of rounding, and because the "Information not available" category for Free/reduced-price lunch is not displayed. Statistical comparisons are calculated on the basis of unrounded scale scores or percentages. Visit <a href="http://nces.ed.gov/nationsreportcard/states/">http://nces.ed.gov/nationsreportcard/states/</a> for additional results and detailed information.

SOURCE: U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessment of Educational Progress (NAEP), 1992, 1996, 2000, and 2003 Mathematics Assessments.

<sup>&</sup>lt;sup>1</sup> Comparisons (higher/lower/not different) are based on statistical tests. The .05 level was used for testing statistical significance. Performance comparisons may be affected by differences in exclusion rates for students with disabilities and limited-English-proficient students in the NAEP samples and changes in sample sizes. NAEP sample sizes have increased in 2003 compared to previous years, resulting in smaller detectable differences than in previous assessments.
